 **Fixed Speed For Hydraulics**

Ok the express purpose of this tutorial is to stop the hordes of people asking for a speed input/setting on the hydraulic.

Simple:  
You need:  
1 Hydraulic  
1 Smoother Chip (Chips-Time)  
1 Constant Value

1. Place the hydraulic as normal.
2. Place the constant value and the smoother near the controller.
3. The constant should be the speed you want the hydraulic to move at in units per second.
4. Wire the following
  - a. Hydraulic Length Input ----> Smoothers Output (only 1 output)
  - b. Smoothers Rate Input ----> Constant Value
  - c. Smoothers A Input ----> The value the hydraulic should go to.

I will add diagrams if requested but since theres only 3 wires i dont feel its wholly nessicery.

Programming today is a race between software engineers striving to build bigger and better idiot-proof programs, and the Universe trying to produce bigger and better idiots. So far, the Universe is winning.

Super Easy Wire Download

### Re: Fixed Speed For Hydraulics

Thank you!  
Hopefully the "hordes" will look here first.

Maybe a sticky with Q&A listed including links to all small tutorials like this one.
